Is Amt accessible after power recycling? After power recycling the whole machine (i.e. unplug the power cable and then re-plug), AMT is not accessible but restarting the system will re-enable access to AMT. The AMT remains accessible no matter the state of the machine afterwards, (e.g. it is accessible after graceful shutdown) provided that the power is supplied uninterrupted. Does Amt work after a power outage? Thank you for joining the community. One of the requirements for AMT to work is the provisioned systems must remain powered in order to be accessible when out of band. This is pretty logical though. Now the fact that AMT does not reconnect after a power outage does not seem completely normal. Most likely there is no direct connection from Meshcentral to your AMT device. To make AMT features to work, you need to activate CIRA. It means AMT will call Meshcentral server to allow port forwarding via this TLS tunnel.
