

Can industrial battery energy storage systems be economically feasible in Brazil? A literature review demonstrated that this paper is a pioneer in demonstrating such a high level of economic feasibility for industrial battery energy storage systems in Brazil. One year of primary data from the industry (historical load demand series) is made available through a GitHub repository so that results can be replicated.

1. Introduction Will Brazil conduct the first energy storage auction? Brazil is set to conduct the country's first-ever energy storage auction for adding batteries and storage systems to the national power grid. Can foreigners invest in battery storage businesses in Brazil? Investment, incentives and taxation scenarios According to Brazilian law, there are no legal restrictions on direct foreign investment in the battery storage businesses or in the power sector (except in very specific segments or sectors of the economy). Can Brazil be a big battery storage country? With well-designed policies and regulations, Brazil has significant potential to follow in the footsteps of jurisdictions like California and Chile for large-scale battery storage, Germany for distributed and large-scale storage, and Australia for both pumped hydro and large-scale battery systems. Could pumped hydro be the missing piece in Brazil's energy system? Conclusion Although energy storage solutions have yet to be widely deployed in Brazil, generation flexibility remains a scarce commodity. Therefore, storage projects, including pumped hydro, could be the missing piece needed to enhance the country's energy system. Will Brazil's energy auction improve power grid reliability? Interest in the auction has been expressed by power companies such as Portugal's EDP and Brazil's ISA Energia. The auction will enhance Brazil's power grid reliability by integrating energy storage solutions for electricity generated from renewable sources such as wind and solar. US Tariffs are shifting - will you react or anticipate?
