Can mobile battery energy storage systems be optimized for distribution networks? Spatio-temporal and power-energy controllability of the mobile battery energy storage system (MBESS) can offer various benefits, especially in distribution networks, if modeled and employed optimally. Accordingly, this paper presents a novel and efficient model for MBESS modeling and operation optimization in distribution networks. What is mobile battery energy storage system (MBESS)? Taking reactive power capability of the battery into account. Spatio-temporal and power-energy controllability of the mobile battery energy storage system (MBESS) can offer various benefits, especially in distribution networks, if modeled and employed optimally. What is a mobile substation? Mobile substations are factory built and tested, and delivered completely assembled and oil-filled. They can be installed on site in a matter of hours. We train your staff on the proper operation of the unit and we service all units we manufacture. We also supply any parts required for service or repair. What is transportable energy storage system project? The institute tackled the topic in a research project called the "Transportable Energy Storage System Project". As stated in the objectives of this project, transportable storage devices can be used to manage load growth and assist in the operation of distribution networks. Why is mobile energy storage a stranded asset? Stationary storage lacks flexibility, suffers from low utilization and from the risk of becoming a stranded asset. Power Edison addressed these issues by developing mobile energy storage platforms: TerraCharge(TM) and AquaCharge(TM) for mobile land-based and water-based mobile energy storage respectively. Can a mobile battery improve distribution network resilience? The mobile battery was used to form dynamic microgrids in severe disasters and enhance system resilience. Similarly, the authors in aimed to increase the distribution network's resilience through mobile resources management. A mobile battery system can offer multiple stacked services similar to a stationary installation.
