

energy storage automatic fire extinguishing device model

The utility model relates to an electrochemical safe energy storage technology, discloses an automatic fire-fighting system with lithium ion battery energy storage, solves the problems that the existing fire-fighting technology with lithium ion battery energy storage is not timely in response and cannot extinguish fire accurately, and the utilization rate of fire extinguishing medium is low, and greatly improves the safety and reliability of the lithium ion battery energy storage system. Fire Protection for Lithium-ion Battery Energy Storage Aspirated smoke and off-gas detection systems Lithium-ion battery cabinet protection Siemens aspirated smoke and Off-Gas Particle detection How does ASD "Off-Gas Particle" (OGP) detection work? Venturi bypass flow Insect filter Chamber flow Dust Intelligent Classification of Airborne Particles Advantages of using blue and infrared light scattering Easy Installation and Integration Low Maintenance and Long Product Lifecycle Features and Benefits Applications As its name implies - "aspirated" smoke and off-gas detection systems use an "aspirator" mounted in a detector unit. The detector connects to a sample pipe network mounted within the area or object being protected. Using the suction from the aspirator, air is continuously sampled and transported to the detection chamber for analysis for particles
