What are the emerging energy storage business models? The independent energy storage model under the spot power market and the shared energy storage model are emerging energy storage business models. They emphasized the independent status of energy storage. The energy storage has truly been upgraded from an auxiliary industry to the main industry. How to make the energy storage industry more standardized? In order to make the energy storage industry more standardized, the business model of energy storage should be studied in depth.

3. Development of various energy storage business models in China

What is China's energy storage business model? China is gradually forming an open electricity sales market with diversified competitors. With ancillary services as the main base, the two-part tariff business model is used for electricity price incentives. Due to its flexibility, energy storage should be widely used in competitive models. Does the energy storage strategic plan address new policy actions? This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of (42 U.S.C. § 17232 (b) (5)).

Can energy storage be a new composite business model? Due to its flexibility, energy storage should be widely used in competitive models. The spot market is used as the carrier, and the energy storage in each application scenario is uniformly deployed through the shared energy storage business model. It can serve as a new composite business model for energy storage.

What is shared energy storage & other energy storage business models? Through shared energy storage and other energy storage business models, the application scope of energy storage on the power generation side, transmission and distribution side, and user side will be blurred. And many application scenarios can realize the composite utilization of energy storage according to demand.
