What are the different types of energy storage policy? Approximately 16 states have adopted some form of energy storage policy, which broadly fall into the following categories: procurement targets, regulatory adaptation, demonstration programs, financial incentives, and consumer protections. Below we give an overview of each of these energy storage policy categories. What is a storage policy? All of the states with a storage policy in place have a renewable portfolio standard or a nonbinding renewable energy goal. Regulatory changes can broaden competitive access to storage such as by updating resource planning requirements or permitting storage through rate proceedings. What's new in energy storage safety? Since the publication of the first Energy Storage Safety Strategic Plan in , there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices. What is the implementation plan for the development of new energy storage? In January , the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system. What does the European Commission say about energy storage? In March , the European Commission published a series of recommendations on energy storage, outlining policy actions that would help ensure greater deployment of electricity storage in the European Union. What is a typical energy storage deployment? A typical energy storage deployment will consist of multiple project phases, including (1) planning (project initiation, development, and design activities), (2) procurement, (3) construction, (4) acceptance testing (i.e., commissioning), (5) operations and maintenance, and (6) decommissioning. Energy Storage Safety Strategic Plan The Department of Energy Office of Electricity Delivery and Energy Reliability Energy Storage Program would like to acknowledge the external advisory board that contributed to the topic State by State: A Roadmap Through the Current US Energy Consumer Protections Consumer protection policies establish rights for customers who install energy storage. Local governments have also introduced a series of policies to promote the construction of new type energy storage in conjunction with new energy power generation. DOE ESHB Chapter 24 Energy Storage Policy and AnalysisGrid operators, federal and state policymakers, utilities and other stakeholders are presently working together to create the right economic and market conditions to ensure that energy Allocation of policy resources for energy storage development A single policy to support energy storage would not capture the environmental benefits of storage development. Instead, the current need is to devise a bundle of policies that Energy Storage Policy and Regulation CEG provides information, technical guidance, policy and regulatory design support, and independent analysis to help break down the barriers to energy storage deployment and advance the development and implementation of Energy storage Technology costs for battery storage continue to drop quickly, largely owing to the rapid scale-up of battery manufacturing for electric vehicles, stimulating deployment in the power sector. Policy Frameworks Supporting the Growth of Energy Storage However, to realize the full potential of energy storage technologies, robust policy frameworks are essential. This article examines the various policy frameworks that State by State: A Roadmap Through the Current US Energy Storage Policy Energy storage resources are becoming an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable ACP proposes BESS safety plan and policy recommendations ACP has released a battery energy storage system (BESS) safety framework outlining key actions and policy recommendations for the industry.
