What makes field a great energy storage company?The energy storage industry is no exception. At Field, they are the glue that holds us together - whether that's by bringing new talent into the business, negotiating contracts or ensuring we have a strong balance sheet. They're absolutely essential to the Field business, enabling us to do the work we do. What makes the energy storage industry so interesting?The energy storage industry is still fairly young compared to others like wind or solar. This means it's rapidly growing, changing and innovating (part of what makes working in the industry so interesting). Are there any data on energy sector jobs?There is a lack of data on the number and location of energy sector jobs in most countries, and even less information on specific occupations . There is almost no data on transmission construction employment. Data on the demand side workforce (energy efficiency, energy management, and electrification) is even scarcer . Why do energy storage companies need a strong finance team?Regardless of which sector they're working in, businesses need strong finance, legal and people teams. The energy storage industry is no exception. At Field, they are the glue that holds us together - whether that's by bringing new talent into the business, negotiating contracts or ensuring we have a strong balance sheet. What role does technology play in energy storage?Technology has a very important role to play in energy storage and has been instrumental in getting the industry to where it is now. That said, we're still learning and solving complex problems each day. This means the industry needs software developers and data scientists, along with machine learning and optimisation experts. Are large scale renewable generation jobs volatile?These show that projected employment for large scale renewable generation under least cost scenarios for the energy transition are highly volatile. There is also significant overlap between occupations needed for different technologies and transmission. What is an energy storage factory worker?An energy storage factory worker plays a pivotal role in the renewable energy sector, focusing primarily on the assembly and maintenance of energy storage systems, such as batteries and capacitors.
