What are the applications of grid side energy storage power stations? Further research directions

Due to the important application value of grid side energy storage power stations in power grid frequency regulation, voltage regulation, black start, accident emergency, and other aspects, attention needs to be paid to the different characteristics of energy storage when applied to the above different situations. How can energy storage power stations be evaluated? For each typical application scenario, evaluation indicators reflecting energy storage characteristics will be proposed to form an evaluation system that can comprehensively evaluate the operation effects of various functions of energy storage power stations in the actual operation of the power grid. Which power station has advantages over other power stations? For example, Station A has advantages over other power stations in terms of comprehensive efficiency and utilization coefficient, while it is relatively insufficient in terms of offline relative capacity, discharge relative capacity, power station energy storage loss rate, and average energy conversion efficiency. Fig. 6. How can energy storage power stations be improved? Evaluating the actual operation of energy storage power stations, analyzing their advantages and disadvantages during actual operation and proposing targeted improvement measures for the shortcomings play an important role in improving the actual operation effect of energy storage (Zheng et al., , Chao et al., , Guanyang et al.,). What time does the energy storage power station operate? During the three time periods of -, -, and -, the loads are supplied by the renewable energy, and the excess renewable energy is stored in the FESPS or/and transferred to the other buses. Table 1. Energy storage power station. How do energy storage power stations use peak function? To fully utilize the peak function of the energy storage power stations, constant power rate mode is used during charging and discharging, and larger power is used during discharging).
