IEC 62619, IEC 63056, and UL provide safety and performance compliance for energy storage packs and systems. IEC 62619 requires that control systems are subject to functional safety analysis. It isn't prescriptive on the standard but suggests 61508 or ISO 13849 can be used. UL provides a basis for safety of energy storage systems that includes reference to critical technology safety standards and codes, such as: The standard includes additional criteria to address materials, enclosures, including walk-in enclosures, controls, piping, utility grid interaction, and Purpose of Review This article summarizes key codes and standards (C& S) that apply to grid energy storage systems. The article also gives several examples of industry efforts to update or create new standards to remove gaps in energy storage C& S and to accommodate new and emerging energy storage These Guidelines provide information on the Inspection and Testing procedures to be carried out by the eligible consumer at the end of the construction of a BESS System, in order to connect it to the Distribution Network in KSA.
