

how to write a business plan for shared energy storage

What is the shared energy storage business model? Fig. 1 shows the shared energy storage business model between the DCC and the SIESS. There are four kinds of energy flow in a DC, including electricity flow, heat flow, gas flow, and cooling flow. Wind turbines (WTs) are installed in DCs to provide supplementary electricity sources. How does a shared energy storage business mode work? Then, an internal energy balance mechanism is set up to make full use of the complementary energy consumption characteristics of different DCs. Finally, a shared energy storage business mode is designed, through which the DCCO can rent energy storage from the SIESS and is charged by the renting capacity and renting power. How to make energy storage bankable? Stacking of payments is the most common way to make the business model for energy storage bankable whilst optimizing services to the grid. In its simplest version it contains: Let the best technology provide the service(s) the grid needs. Thinking of technology first could do the grid a disservice. I o n e p r o j e c t s ? I t d e p e n d s . Is shared energy storage a viable business model for data center clusters? As mentioned above, there is a lot of research studying the shared storage business model [39, 40]. However, to the best of our knowledge, there is little research considering the economic benefits of the integrated shared energy storage business on the data center cluster (DCC). Does the energy storage business model improve economic benefits? Compared with Case 2, the daily cost of the DCCO is decreased by 19.06%, which implies that our proposed energy storage business model leads to a great improvement in economic benefits. Table 2. Scheduling results of the DCC and the SIESS under five cases. What is shared Energy Storage (SES)? As a new paradigm of energy storage industry under the sharing economy, shared energy storage (SES) can effectively improve the comprehensive regulation ability and safety of the new energy power system.
