

What is the IEA special report on battery storage? The IEA Special Report Batteries and Secure Energy Transitions is available at this link. IEA special report: battery storage capacity must increase six-fold by 2040. Should governments consider energy storage? In the electricity sector, governments should consider energy storage, alongside other flexibility options such as demand response, power plant retrofits, or smart grids, as part of their long-term strategic plans, aligned with wind and solar PV capacity as well as grid capacity expansion plans. What types of energy storage are included? Other storage includes compressed air energy storage, flywheel and thermal storage. Hydrogen electrolyzers are not included. Global installed energy storage capacity by scenario, and - Chart and data by the International Energy Agency. The global battery storage capacity must increase six-fold by 2040 - this is the main message of the International Energy Agency's (IEA) Special Report, Batteries and Secure Energy Transitions, published in April. The global battery storage capacity must increase six-fold by 2040 - this is the main message of the International Energy Agency's (IEA) Special Report, Batteries and Secure Energy Transitions, published in April. This year's Outlook comes against a backdrop of escalating risks in the Middle East and heightened geopolitical tensions globally, and explores a range of energy security issues that decision makers face as they proceed with clean energy transitions. With rising investment of clean technologies and Through its work, the IEA advocates policies that will enhance the reliability, affordability and sustainability of energy in its 31 member countries, 13 association countries and beyond.
