How much energy can a mine storage store? Flexible Grid-Scale Energy Storages that Supports a Zero-Carbon Grid A mine storage has grid-scale energy storage capacity and can discharge energy for 2-12 hours. Sizes can vary between 15-200 MW // 30-2 400 MWh. A mine storage has a high round-trip efficiency of 75-85 % depending on size and configuration. How does a mine storage support the energy system? A mine storage supports the energy system in several ways, often simultaneously. It can act as energy storage, grid frequency regulator, capacity reserve, transmission support, inertia provider, or as a behind-the-meter solution to support large energy producers or energy-intensive industries. Can an abandoned mine be turned into a mine storage? Turning an abandoned mine into a mine storage turns it from a liability into a circular asset. Given the compelling business case, the high round trip efficiency and the long lifespan of a mine storage, the levelized cost of energy storage (LCOS) is very competitive.
