How many mw can a compressed air system produce? CAES systems are categorized into large-scale compressed air ES systems and small-scale CAES. Large-scale systems are capable of producing >100 MW, while the small-scale systems only produce 10 MW or less . Moreover, the reservoirs for large-scale CAES are underground geological formations such as salt formations, host rocks and porous media.

How is atmospheric pressure stored in a cryogenic storage tank? The liquid air of atmospheric pressure is stored in a cryogenic storage tank. During the discharge process, liquid air is pumped into the cold storage/heat exchanger for heating to atmospheric temperature and gasification, and before that the liquid air is already pumped to supercritical pressure by a cryopump.
