Solar photovoltaic (PV) energy and storage technologies are the ultimate, powerful combination for the goal of independent, self-serving power production and consumption throughout days, nights and bad weather. What is a solar photovoltaic power station? A solar photovoltaic power station is a single power station, designed by a single developer (or consortium), and usually has a single outlet connection to the grid. In some cases, it can be deployed on several nearby lands and/or built across multiple stages. Why do PV power plants use energy storage systems? The use of energy storage systems (ESS) in PV power plants allow an optimal performance in all PV systems applications. For power plants oriented to the self-consumption, ESS allows minimize the exchange with the grid, increasing the percentage of energy used from photovoltaic generation.
