Power Automate Power BI's lack of admin and monitoring tooling is by far its biggest shortcoming--especially surrounding refresh management. The sooner you realize you will not get out of it Running Python scripts in Microsoft Power Automate CloudI use Power Automate to collect responses from a Form and send emails based on the responses. The main objective is to automate decision-making using Python to approve powerbi In Power Automate, within the Power BI connector, you'll find the "Run a query against a dataset" action. Take note: this can only return one table at a time with max of 1,000 How to use Power Automate flows to manage user access to Manage list item and file permissions with Power Automate flows Grant access to an item or a folder Stop sharing an item or a file As per my knowledge, The Stop sharing an power automate 0 Creating a flow in Power Automate: New Step Choose the OneDrive "Get file content" action File = /Documents/Folder/File.json Infer Content Type = Yes New Step Choose How to solve the network error when using a patch function?
