What are the challenges in the application of energy storage technology? There are still many challenges in the application of energy storage technology, which have been mentioned above. In this part, the challenges are classified into four main points. First, battery energy storage system as a complete electrical equipment product is not mature and not standardised yet. What was the growth rate of energy storage industry in ? Driven by the Euramerican and Asia-Pacific market, worldwide energy storage industry experienced fast development in . According to CNESA, global cumulative installed capacity of energy storage system was 946.8 MW (excluding PSS, CAES and heat storage) by the end of and the growth rate was 12.7% compared with year . Does energy storage industry need a policy guidance? Sungrow Power Supply Co., Ltd.: energy storage industry needs the policy guidance urgently. Machinery & Electronics Business; : A06. Policy and innovation are key factors for the development of energy storage technology. China Electric Power News; : 008. Lin Boqiang. Is energy storage a precondition for large-scale integration and consumption? So to speak, energy storage is the precondition of large-scale integration and consumption of RES. However, China's energy storage industry is at the exploration stage and far from commercialization. This restricts the development of RES to certain extent. For this reason, this paper will concentrate on China's energy storage industry. Why should energy storage technology be mastered industriously? Core techniques covering material, devices and system should also be mastered industriously , . By that time, the energy storage technology system will be comprehensively established and achieve the international advanced level, thus leading the development of world energy storage technology and industry. What are the problems limiting the commercialization of China's energy storage? Besides the objective technology immaturity, there exist other problems restricting the commercialization of China's energy storage including the high cost, incomplete technical standard system, imprecise evaluation system and imperfect policies.

3.1. Low technical-economic efficiency caused by high cost
