Solar water heating systems collect the thermal energy of the sun and use it to heat water in homes and businesses. The systems can be installed in any climate to reduce utility bills and are composed of three main parts: the solar collector, insulated piping, and a hot water storage tank. When searching for the best storage tanks for solar water heaters, you'll want to take into account capacity, durability, insulation, and heating efficiency. Top brands like Rheem, Bradford White, and A.O. Smith offer tanks ranging from 50 to 120 gallons, featuring glass-lined interiors for durability.

Solar water heaters--sometimes called solar domestic hot water systems--can be a cost-effective way to generate hot water for your home. They can be used in any climate, and the fuel they use--sunshine--is free. Solar water heating systems include storage tanks and solar collectors. There are two types of solar water heating systems: direct and indirect. Direct systems use solar collectors to heat water directly, while indirect systems use a heat exchanger to transfer heat from the solar collectors to a separate storage tank.

Solar water heating turns sunlight into a cost-effective way to generate hot water for residential buildings.
