What are the energy planning strategies for Burundi? Energy Planning Strategies for Burundi The Burundian energy supply highly depends on traditional use of biomass. The literature shows that the power supply of this country mainly relies on hydropower generation. Many hydropower projects are under development to increase the electricity access of this country. Does Burundian power supply match domestic energy demand? As the Burundian power supply not matching the domestic energy demand, the energy needs is mostly represented by traditional biomass at about 96% of total energy consumption, mostly used for cooking in rural areas (in traditional way) and urban areas as charcoal. What type of energy is used in Burundi? Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Burundi: How much of the country's energy comes from nuclear power? Why is Burundi lagging in energy supply? Despite some efforts in the region to increase energy supply at national and regional levels, Burundi is lagging from meeting its total power demand: 10% of its population had access to electricity in 2010, this access rate has only turned to 11% in 2015 according to World Bank data. Why is energy demand increasing in Burundi? Limited capability and resources to improve energy efficiency are also the main factors contributing to the increase of Burundian energy demand. Incorporating these factors into energy demand forecasts is crucial for a capital constrained developing country, like Burundi, where reliable energy supply capability is limited.

4.2. Is biomass a source of electricity in Burundi?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Burundi: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.
