What is a polyethylene tank? Polyethylene tanks are the most common. This is due to polyethylene's ease of handling, water compatibility, resistance to rust and weather effects, reduced cost, and range of volumes and styles. What are water storage tanks made of? For water storage applications, tanks can be metal tanks made from galvanized steel and stainless steel or plastic tanks made from high density polyethylene (HDPE). Polyethylene tanks are the most common. How do you install a water tank? When installing a water tank: know what you're using it for, choose the right tank and plumbing for the application, properly prepare the installation site, and consider tank placement in terms of proximity for plumbing and access, the amount of sun exposure, ground conditions, and resting height above service outlets. Should a water tank base have a retention wall? Retainment walls are recommended in all tank base constructions to promote structural durability and resistance to weathering such as stormwater flow and erosion. The area of a water tank base should be sized to extend at least 4" from the edge of the tank sidewall and continue fully around the tank. What is a water tank used for? The most common water tank uses are for rainwater harvesting, collecting and holding well water for property use, commercial applications, small business jobs, industrial manufacturing, process lines, and storing water that has been delivered to households or farms in arid, drought frequent locations.
